# Area User’s Guide

Kylian BALAN - Nathan LECORCHET - Ghassane SEBAÏ - Rodolphe DUPUIS - Eliott PALUEAU

# Summary:

# I. <u>Introduction.</u>

The purpose of this document is to explain how to use the different functionalities of the ChadArea application.
This guide is designed for both the web and the mobile version of the application.
Through this document you will learn how to properly use ChadArea.

# II. <u>Register & Login.</u>

## A. <u>Register to ChadArea.</u>

To access the ChadArea application, you will first need to create an account using the *"Sign-up"* form on the landing page of the app.

You can also use an existing Microsoft Office account and skip this part.

To create your account, an email, a username and a password are required, this information could be modified later in the application.

## B. <u>Login to ChadArea.</u>

There are 2 ways to login into the application.

You can either login using your credentials if you have created an account or login with your Microsoft Office account.

If you choose the second option, you will reconnect automatically each time you go to the login page (unless you manually disconnect from the application).

## III. Application overview.

Here are the different pages that you can find in ChadArea:

- Home Page (web only): Landing page of the application.
- Dashboard Page: Manage your created AREAs and create new ones.
- Profile Page: Edit your personal information and register to services.
- About Page: Project description and credits.

## IV. Profile page.

### A. Edit information.

Using the corresponding form, you can edit your personal information, this include: your username, your email and your password.

### B. Register to a service.

In this section you can see the services you are registered to.

You can also register to the other services, this registration will allow you to “unlock” new Triggers/Reactions which can be used in your AREAs.

## V. Create a new AREA.

You can create an AREA from the *Dashboard* page.

In order to do this, you will need to select a trigger then a reaction.

Firstly, you need to choose a trigger.
To do so, use the drop down to select the service and then the trigger you want to use.

Then, choose a reaction the same way.

Note that you can’t select a trigger or a reaction from a service you are not registered to.

## VI. Edit an existing AREA.

If you want to edit an existing AREA, select it from your list and click the *pen* button.

You can modify the trigger/reaction just like you did to create the AREA.

## VII. Delete an existing AREA.

You can delete an existing AREA from the *Dashboard* page.

Go to the list of AREAs and click the *bin* button on the right of the AREA you want to remove from your list and it will be deleted!

## VIII. Triggers overview.

Here is a list of the different triggers that you can use to create your own AREAs:

Outlook:

- Reception of a new email.

Youtube:

- New video uploaded by a specific channel.
- New video added to a specific playlist.

Github:

- New issue added in a specific repository.
- Specific issue closed in a specific repository.
- New repository created by a specific user.
- New Pull Request in a specific repository.
- New tag (release) added in specific repository.
- New ref (branch) added in a specific repository.

Timer:

- Specific hour.
- Specific day.

## IX. Reactions overview.

Like the previous part, you will find here a list of all the different reactions that you can use to create your own AREAs:

Outlook:

- Send an email.

Twitter:

- Post a tweet.
- Update your account bio.

Github:

- Create a new issue containing a specific message in a given repository.

Discord:

- Post a message on a given channel of a specific server.
